GET A FREE SAFETY CHECK

MAINTENANCE & SERVICE

Securing your premises can be costly and you are going to want to make sure that you get maximum value for your investment. Even the best mechanical security systems need regular care and maintenance to keep them at optimum performance. Our annual maintenance and service packages ensure your mechanical security systems are working correctly.

AUTOMATIC DOORS

Suitable for a wide range of premises, such as offices, retail outlets, hospitality sites, healthcare centres and many more. They are compact, durable, and energy efficient. They can be customised and enhanced with a variety of safety and security options suiting the needs of your business. Our Automatic Doors are easy to install and comply with the latest safety standards.

BI-FOLD GATES

Bi-folding trackless speed gates open quickly allowing a fast throughput of traffic whilst maintaining security of the premises. They're the ideal security solution for wide openings such as warehouse and factory units.

FIRE SHUTTERS

Our Fire Shutters close down automatically in the event a fire is detected, preventing the spread of fire and smoke within the premises. Our Fire Shutters are made to withstand various fire resistance levels and are compliant to BS EN 16034 & BS EN 13241. Fire Shutters should be serviced every six months, and with our maintenance and service packages, and our sister company Cannon Fire Protection, we can help to provide you with an all round fire safety plan.

HIGH-SPEED DOORS

High Speed doors use high powered mechanics to increase the speed of their roller or shutter cycles. As a result, these industrial doors operate at significantly quicker speeds than standard industrial doors. They improve security, ease of access, they improve energy efficiency, they prevent pests and other contaminants and they also help to reduce factory noise.

RISING BARRIERS

Technically advanced and easy to operate, our Automatic Rising Barriers come with a wide range of specifications and options to ideally suit the requirements of your site. Rising Barriers are suitable for a wide range of premises from caravan sites, club and hotel car parks through to high security locations as part of a comprehensive security system.

RISING BOLLARDS

Manual and Automatic Bollards provide ideal security for smaller premises where space is limited. Hydraulically operated Automatic Rising Bollards are an ideal low-cost solution. They're technically advanced, robust and can safely control access to site premises.

ROAD BLOCKERS

Automatic Rising Kerbs, also known as Road Blockers, provide a tough and reliable solution to prevent unauthorised vehicles entering into high security/protection zones. Our Road Blockers can be manually controlled or integrated into an access control system. We provide surface mounted models as well as retractable models.

ROLLER GARAGES

Our Electric Roller Garage Door Systems enhance the look of any residential property and are a convenient alternative to a standard manual garage door. The Electric Roller Garage removes the need for external locking and the inconvenience of manually operating a garage door.

ROLLER SHUTTER

Roller Shutter are one of the most popular forms of Perimeter Security used by businesses. They're relatively low-cost, easy to operate and provide excellent security to your premises. We provide single phase or 3phase motors of all sizes, as well as manual or remote controlled functionality. Our Roller Shutters can also be standard or insulated.

SECTIONAL OVERHEAD DOORS

Sectional overhead doors, also known as the up-and-over door, operate in a similar way to a traditional residential garage door. However, the sectional panels and track mean the door does not swing outwards, – they open vertically, meaning they can open even when a vehicle is parked right up against them. They're space efficient, allow good flow of traffic and are a good security option.

SLIDING GATES

Our industrial Cantilever Sliding Gates are suited for areas of high-usage, but need reliability and low maintenance. Our Sliding Gates are very easy to install and are manufactured and installed to the current BS/EN12453 safety regulations.

SPEED LANES

Speed Lanes are also known as Automatic Pedestrian Control Speedgates. They provide access control and control the flow of people. They're a perfect security measure where there's a limited security presence on a property such as reception areas.

STEEL HINGED DOORS

Steel Hinged Doors are essential for industrial and retail buildings. We offer fire rated, acoustic and security rated doors to LPS 1175 in a range of RAL colours.

SWING GATES

Our Swing Gates can be manufactured and automated to suit the needs of the individual business. That means height, width, depth, texture and colour.

TURNSTILES

Turnstiles from Boundary Gate & Barriers offer a secure and efficient pedestrian traffic management around your premises. We provide a wide range of turnstiles such as height and shape mechanisms.

ABOUT US

Boundary Gate & Barrier are a nationwide Perimeter Security Automation company with a wealth of experience and thousands of completed projects in our portfolio.

We offer a full design, manufacturer and installation service (including civil works) for all projects, and we carry out full maintenance and repair work.

We have a wide range of domestic, commercial and industrial systems to suit all customers requirements. Our range of automation systems can be interfaced with a wide range of access control equipment as well as CCTV and alarm systems, for a fully comprehensive on site security solution. We have also developed a close relationship with all our suppliers and clients, which enables us to continually offer you the best quality and safety standards available.

IS YOUR AUTOMATIC GATE, BARRIER OR BOLLARD COMPLIANT?

- European Machinery Directive - BS EN 13241-1
- Health & Safety at Work Act 1974
- Provision of Use of Work Equipment 1998

If in doubt, please call Boundary Gate & Barrier for a free, no obligation consultation on: 0870 251 0034 or 0844 413 0184
